# Grey, 1111

***AT-Color aerosol paints are fast-drying alkyd paints. The paint has good wear resistance and keeps its shine and color in variable conditions. Suitable for wood, metal, stone, glass and other hard surfaces. To achieve the best possible result, carefully clean the surface to be painted. Use AT-Color Primer to provide the corrosion protection and to have a sufficient layer to paint on. Clean the surface from dirt, rust and grease. The surface must be dry before painting. Shake vigorously before use about 3 minutes. Spray from a distance of 20cm. Make a test painting on a small area first. Spray several thin coats between a few minutes. Repaint after 15 minutes (wet on wet painting) or after 7 days (+20C) after use clean the nozzle by turning the bottle upside down and pressing the nozzle until only propellant comes out. For indoor and outdoor use.***
