FLUORESCENT TUBE SPRAY, 2233

Fluorescent tube spray is a dry lubricant that has been developed to facilitate the removal of the oxidised and jammed sockets of fluorescent tubes, as well as those of lamps and lamp parts. Gives effective and long-term lubrication. Allows for easy re-detachment. Thanks to its modern composition, the product is non-flammable and non-conductive – therefore, it is safe to use on warm, hot and live voltage objects. Pulverise the jammed detail and allow it to act for a few seconds. Thanks to its very low coefficient of friction, the active substance loosens even tightly jammed parts. Silicone-free non-staining dry lubrication material, which does not accumulate dust. Its small size makes it easy to carry with you to facilitate the work of professionals.
