

## CERAMIC PROTECTIVE AGENT FOR WELDING NOZZLES, 2625, 2626

Ceramic protective agent for welding nozzles protects the nozzles, contact terminals, workpieces and surrounded holders and the nearby parts. The ceramic surface provides lasting protection that lasts up to 8 hours of work time. Saves time and ensures a cleaner welding process. Suitable in particular, for robotic works, and as a mould release agent at high temperatures (+900 °C).
